

## **Metal & Stainless Steel Polishing Compound**

1. Prepare the surface.

Clean the metal thoroughly to remove grease or dirt. Dry fully before starting.

2. Apply a small amount of compound.

Place a thin layer of compound on the pad or directly on the surface.

3. Start polishing.

Use steady circular motions. Apply light to moderate pressure, letting the compound and pad do the work — avoid pressing too hard.

4. Work in sections.

Polish small areas at a time, using overlapping passes to ensure an even finish.

5. Reactivate if needed.

If the compound begins to dry out, mist lightly with water to keep it active.

6. Check progress.

Wipe away residue with a microfiber cloth to inspect the shine. Reapply compound and repeat if necessary.

7. Final buff.

Once the desired finish is achieved, buff the whole surface with a clean microfiber cloth to enhance gloss.

### **Disclaimer**

As this product is sold for Home Use on a Do-It-Yourself basis, it is sold with no warranty and/or liability for any glass, fittings or fixtures and/or any personal injury. Although all products contained in the kit are non-toxic and safe to use, please keep this kit out of reach of small children.
